

RFP Response: NexaWorks

Executive Summary

NexaWorks proposes a balanced, well-governed rollout of an AI-assisted RFP evaluation platform, with particular emphasis on a low-risk phased implementation plan and a support model built around the client's day-to-day procurement operations.

Proposed Solution & Implementation Approach

A modular platform combining configurable scoring workflows, structured document extraction, and a dedicated peer-benchmarking module, deployed in three controlled phases (pilot, limited rollout, full rollout) to minimize disruption.

- Standard connectors for two major ERPs, with a documented custom-integration path for others.
- Configurable criteria and weighting managed entirely through an admin console.
- Built-in change-management toolkit (training materials, sample workflows, office hours).

Timeline, Team Structure, and Milestones

Total delivery duration: 14 weeks from contract signature, with a detailed RAID log (risks, assumptions, issues, dependencies) reviewed weekly with the client.

Phase	Milestone	Staffing
Weeks 1-2	Discovery, criteria workshop, RAID log baseline	PM, Solution Consultant
Weeks 3-6	Pilot build with 1 business unit	4 engineers, 1 PM
Weeks 7-10	Pilot feedback, refinement, limited rollout	4 engineers, 1 trainer
Weeks 11-14	Full rollout, training, handover	Full team + 2 trainers

A named escalation path and weekly steering committee cadence are included by default, along with a documented rollback plan for each rollout phase.

Price Table and Assumptions

Line item	Detail	Cost (USD/yr)
Platform license	Annual subscription, up to 25 users	84,000
Implementation	Phased delivery, fixed fee	58,000
Change management toolkit	Training materials, workshops	9,500
Standard support	Business hours, 4-hour response SLA	14,000

Assumptions: pricing in USD, excludes taxes; assumes one named business sponsor is available for weekly check-ins throughout the engagement.

Security, Compliance, and Risk Controls

NexaWorks holds SOC 2 Type II certification and follows a documented secure SDLC. Access is role-based with quarterly access reviews. A named data protection officer is available for compliance questions during the engagement.

- Encryption at rest and in transit (industry-standard algorithms).
- Quarterly vulnerability scans; annual penetration test summary shared with clients.

Support Model, Relevant Experience, and References

Dedicated customer success manager plus a shared support desk (business hours, 4-hour response SLA, 24/7 for Severity 1 incidents). NexaWorks has delivered five similar procurement or vendor-evaluation platforms in the past three years across retail, logistics, and public-sector clients.

Two references available on request, including a public-sector client that cited the phased rollout plan as a key reason for on-time go-live.
